a) *isocetes triangle*    b) *parallelogram*    c) *parallelogram*    d) *square*

ii.

a)  $1440^\circ$     b)  $144^\circ$

## 1.5 Congruence

## Practice - Answers

i.

a) No. Only the angles are equal. The corresponding sides may not be equal.

b) Yes.  $PQRS = TUVW$ . Corresponding sides and angles are equal.

c) Yes.  $XYZ = NLM$ .

ii.

a)  $ABC, YZX$

b)  $ABC, EFD$

c)  $XYZ, QRP$

iii.  $AB = CD, AD = BC$  and  $BD = BD$ . The triangles are congruent since all sides are the same.

iv.  $BC = BD - CD, DE = CE - CD$ . But  $BD = CE$ , so  $BC = DE$ .

$CA = AD$  (given)

Angle  $BCA = 180^\circ - \text{Angle } ACD$

Angle  $ADE = 180^\circ - \text{Angle } ADC$

But, Angle  $ACD = \text{Angle } ADC$ , so Angle  $BCA = \text{Angle } ADE$

If  $BC = DE$  and Angle  $BCA = \text{Angle } ADE$  then the triangles  $ABC, ADE$  are congruent.

**v.**

Angle ABC = Angle ACB

Angle ABC = Angle ADE

Angle ACB = Angle AED

Angle ADE = Angle AED and ADE is isosceles

Angle AD = Angle AE

So, triangles ACD and ABE are congruent.

**vi.**

Angle ABE =  $180 - 2 \times$  Angle AEB

Angle DBC =  $180 - 2 \times$  Angle BDC

But, Angle AEB = Angle BDC

So, Angle ABE = Angle DBC

Angle ABD = Angle ABE + Angle EBD

Angle ECB = Angle DBC + Angle EBD

Therefore Angle ABD = Angle ECB

AB = EB

BD = BC

So, triangles ABD, ECB are congruent

**vii.**

If we use Pythagoras' Theorem then side AB = 4 cm and side DE = 3 cm, so the triangles are congruent.

# Glossary of Keywords

The glossary in the Students' book is a list of all mathematical words that appear in the module. They are given in the order that they appear.

The following short activities are added to this guide to help students remember mathematical vocabulary. They can be used in several ways: to test prior knowledge of a topic, as warm-up activities at the beginning of a lesson or to review what has been learnt at the end of a topic.

## Activity 1 - Discuss questions in pairs.

Students are given questions to discuss that relate to a topic.

Example questions -

What is an improper fraction?

How do I change from milligrams to tonnes?

How do I find the perimeter of a square?

What is the commutative law?

What is the order of operations?

## Activity 2 - True or false.

Students work in pairs to decide if statements about a topic are true or false.

Example for fractions -

The denominator is the top number in a fraction.

The numerator is less than the denominator in an improper fraction.

Equivalent fractions have the same numerator.

## Activity 3 - Give an explanation.

Students work in pairs to prepare a short explanation to questions. Ask some students to give their explanation to the class.

Examples -

Explain how to change from a mixed number to an improper fraction.

Explain how to calculate:  $(2 + 3) \times (7 - 42)3$

Explain the mistake in this statement:

Explain what a negative number is.

## Activity 4 - Brainstorming

Write a topic on the board and ask students what they know about the topic. Write their answers on the board.

## Activity 5 - What's the topic?

Write words linked to a topic on the board and ask students if they can guess the topic.

# Assessment

This assessment covers most of the topics in this module and should give you an idea of how much the students have understood. It is recommended that you give it as a class test, with some time for review and revision beforehand.
